

I DESIGNED

THIS POSTER

FOR THIS

ASSIGNMENT

Bruno Hart IXXN390 Assignment 2 - **Design Progress**

Letterboxd
Designed by
Bruno

Introduction:

For the first assignment I focused on the user, emotional resonance and the experience of being human in the modern world. I zeroed in on the film-going model and the state of cinema as an industry and a domain I could offer an outsized impact in as a designer building upon years of prebuilt specialised knowledge. The intention for assignment one was to lay the groundwork necessary in order to figure out the potential areas to solve for in a space where design thinking is underserved.

This second assignment, I progressed from my previous research by drilling into the component and architecture level of the Letterboxd experience. This was done in order to understand how future features I propose are not only intuitive and delightful but are demonstrating a fundamental understanding of core technical skills. My focus was on analysing key architecture patterns and usability in order to bring iterative concepts to life, while also conceiving the entire scope of the product experience in users journeys and interaction maps in and around the cinema.

As an overview to the design development to follow I begun this next stage of the process by scoping the broader systems interaction and mapping the specific areas I am then wanting to add to the total experience.

As a summary, these are the UX/IxD methods I used in assignment two in order to meet the brief laid out from assignment one:

- Systems Interaction Map
- Sitemaps (old and new proposed)
- Participant testing (early insights)
- User Journey Mapping
- Empathy Map refinement
- User Personas
- State Modeling
- Sketching
- Visualised Mockups/Storyboarding
- Storytelling
- Wireframing
- Hifi x lofi concept iteration and development
- Edge case and accessibility thinking
- Xcode Prototyping
- High Fidelity flows
- User testing with cinema-goers
- EVT in-person experience further research
- Design framing of cinema as a communal and interactive experience

The process of this development that was achieved through these methods and techniques is extrapolated in this progress document.

My Design Goals and Focus from Assignment One:

My underlying vision and aspiration for the project was to create real-life meaning by translating user-engagement with Letterboxd into actions that are more closely tied to getting people into shared places to watch films and build a sense of belonging.

The core aims set out from assignment one were as follows:

- Create a set of 3-5 tools/features that increase the potential of attending a film screening
- Design decisions are guided by analog values: simplicity, tactility and emotion
- Deliver a concept that is modular: the ability to be adopted across independent cinemas whilst raising Letterboxd's audience engagement and brand value
- Build visual and prototyping skills for the design of digital products as well as physical spaces (integrated approach to the "user-space" as something that is digital and physical, personal as well as communal)
- Demonstrate how the design can serve slowness not just speed: friction as a function not a flaw

With respect to the above every single goal was achieved with an energetic enthusiasm and a distinct identity that is beginning to mark what it means to be *Designed by Bruno*.

Analysis of architecture and identifying potential opportunities in the entire Interaction scope:

To begin addressing the opportunities and ideas for the design from assignment one into tangible features I turned to **systems and structural mapping**:

My first step moving on from assignment one was through a systems interaction map which helped me to visualise how users, cinemas, and the platform could exchange behaviours and data. This was crucial in order to actually facilitate my learning about how Interaction Design can take on a multi-variant approach to problem solving across spaces (as identified in assignment one). Conceiving of the experience holistically and translating Interaction patterns and UX methods between the digital and the physical, between the personal and the communal.

However in order to facilitate this I needed to further analyse and research the hierarchy of orders in Letterboxd's current product offering. This step was crucial for developing design architecture skills and a diagnostic assessment of what the structure of Letterboxd looks like for users. **[SCOPE OF PROJECT WAS KEPT TO ONLY ANALYSING THE APP].**

Letterboxd Current App Sitemap

Letterboxd Current App Sitemap

I now mocked up the entire sitemap visually to later see how my mocked up screens would fit

I then created the Systems Interaction map using Design Rationale from Assignment 1:

From assignment one, three insights shaped the systems map:

1. Cinema as ritual — “more than a ticket, it is a marker of identity and belonging,” inspiring reflective diaries and lobby quotes.
2. Fractured journey — “discovery, booking, and reflection scatter across disconnected platforms,” leading to unified invites, passes, and diaries.
3. Venues as actors — EVT research showed cinemas actively shape experience, justifying scanning, confirmation, and dashboards.

Mapping these flows translated insights into a cohesive system and **grounded later design decisions** in what I was fundamentally trying to conceive and achieve.

SYSTEMS INTERACTION MAP

NEXT STEPS

- ↳ visualizing flow through mockups
- ↳ Designing + Prototyping core product features
- ↳ Thinking about brand feel + brand fit

Programable working prototype
Intended static mock-ups of features
GREY BOXED/DUMMY

Re-type out
each key outlined
step so we can
also then see what
a specific + desired journey
would look like

This is an insanely complex process that was radically distilled into an insightfully rich and buoyant map

Phase	Touchpoints (Journey)	Systems Interaction Map Nodes	Relation / Narrative
Pre-Film	Open Invite Link → RSVP + Calendar Add → Map Route → Create Wallet Pass → Deliver QR/ NFC Pass → “Tonight’s slate push”	A3 (Open Invite Link), C3 (RSVP + Calendar API), A5 (Map Route), A13 (Create Wallet Pass), C5 (Generate Wallet Pass), C7 (Upload QR Cache System)	These features embody the ritual of anticipation — invitations flow from platform to user, solidifying intent and producing tangible entry tokens (passes).
Arrival / Check-in	Scan QR/NFC or fallback short code → Print collectible stub → Check-in success (haptic + chime) → Dashboard (capacity light)	B1 (Scanning Front of House), B5 (Print Confirmation), A11 (Upload Once They Scan), B7 (Venue Dashboard)	Venue and user interactions converge here. The map captures how Letterboxd connects with cinemas operationally through scanning, feedback, and
During Film	Auto Quiet Mode (suppress notifications) → Comfort/A11y surfaces in auditorium	A7 (Auto Quiet Mode), “Comfort/ Surfaces” note linked between User + Venue	This sustains immersion. The interaction map shows the system suppressing external noise while venues adapt conditions — extending
Post-Film Reflection	3-min reflective window → Diary draft → Auto-save offline first → Mood/ doodle/photo add → Upload/cache → Draft confirmation → Schedule publish → Anonymous quotes to lobby	A12 (Reflective Window), C11 (Diary Draft), C9 (Offline Cache), A10 (Deliver Quick Fix), C10 (Upload to Lobby)	Reflection becomes a ritualized system step. Mapping made clear how ephemeral feelings can be scaffolded into structured, shareable artifacts.
Identity / Loyalty	Attendance logged → Stamp rule check → Unlock (non-gamified) artifact → Venue reward eligibility → Update clusters → Taste map refresh → Share to club / plan outing → Privacy-safe metrics	C12 (Identity Artifacts), Lobby Quote System, Venue Dashboard links	Insights about cinema as ritual and venues as active players materialize here: loyalty isn’t points, but identity artifacts and subtle recognition, grounding brand values in user belonging.

Early Insights of User informed by Apple logic

Testing led design

Grey-boxed models were used for testing but due to unforeseen computing errors screenshots of this

into my already that

Following the systems interaction map I began stepping

concept iteration that I had generated

from my first assignment to bring testable screens

could be conceived in the scope of the interactive product

experience by different users. These early insights then helped me to

quickly move on to making higher-level decisions (a design process I have adopted whilst reading Ken Kocienda's *Creative Selection* which was one of my self-listed reads to become a better designer through the Capstone's facilitation)

👂 Based on conversations here are some key observations for taking into the design

- The tactility and emotion of a designed printed stub, felt like an extension of the experience.
- Users tended to smile or exhale when I mentioned the idea of a Quiet Mode banner appearing or being enabled — visible relief at not having to manage notifications.
- The reflective window worked best when paired with a gentle haptic; too subtle a cue risked being overlooked.
- The human-beings expressed that the design "felt cinematic" rather than app-like — a strong validation of the analog/digital blend.

What was liked

"The flipcard feels like an invitation to something special, not just another event notification."

"The 'publish later' is perfect. Sometimes I need a night to process a film before saying anything."

"The diary window thing feels useful actually lol."

"I like the idea that I get a physical well-designed stub. It's something I want to keep in my wallet."

Insights from Tests and walk through of early mockups

Invites

"It feels personal when I flip a card to invite someone — less spammy than a DM."

"The invite card looks like a proper event ticket, not just a text. I'd actually want to send this to friends."

🤔 What Was Confusing (but Minor)

"How does this loyalty thing work? Is that Letterboxd or cinema thing and do I win stuff???"

"Do I scan the QR or just tap my phone at the kiosk. That needs to make more sense."

"It would be cool if somehow I can use the app for messaging people as well."

"Taste maps is kind of stupid if I already have the stats tab"

Cinema Map

"Feels like a treasure map for film nerds — I love seeing where I could go watch something tonight."

"Honestly the map makes it way easier. I didn't even know half these little indie cinemas were around me."

"Wait, do I need to click on the cinema to see showtimes, or is it just the venue? That part was confusing."

Film Club

"It'd be nice if the club kept a shared diary of everything we've watched together. That feels collectible."

"The club feature is genius. I've always wanted a small circle where we log the same movies and have a vibe."

"I don't get how new people join a film club.. like is it invite only, or public like groups? That needs to be clearer."

Then added the diary to the group but still exploring ways of making it collectible

In iterating on these screens I made deliberate design decisions that balanced user feedback with my original design philosophy from assignment one. I stripped away redundant watch lists to reduce noise and elevate ritual, repositioned invites as central ticket-like artefacts, and designed in continuity through Apple Calendar and Wallet integration. Acceptance states were simplified into clear, re-engageable flows, while event details were layered contextually to address confusion from testing. Finally, both user and cinema profiles were reframed as gateways into invites, diaries, and events—cementing the venue as an active participant in the ritual of cinema.

User Personas and updated empathy mapping

I developed my personas by grounding them first in assignment one insights and then refining them through early user testing feedback.

Ben Romero emerged from the insight that many cinephiles long for cinema as an aesthetic ritual rather than a transactional experience. His goals (“to direct films that feel like dreams”) and pain points (academic film culture being “too dry,” longing for more physical engagement) gave rise to design decisions like the reflective diary window, tactile loyalty artifacts, and analogue-inspired invites. User testing reinforced these needs, validating that features like collectible stubs and quiet mode directly answered his desire to “capture the emotional residue of a screening.”

“I don’t just want to make movies. I want to make people feel like they’re dreaming with their eyes open.”

Profile Overview

- **Name:** Ben Romero
- **Age:** 22
- **Pronouns:** he/him
- **Location:** Auckland, NZ
- **Occupation:** Final-year student, double major in Film & Graphic Design
- **Personality Type:** INFJ — visionary, idealistic, detail-oriented
- **Letterboxd Top 4:**
 - *8½*
 - *Her*
 - *The Double Life of Veronique*
 - *La Haine*

Design + Tech Life

- Uses **Figma**, **InDesign**, and **DaVinci Resolve** daily.
- Designs posters, stickers, and physical props for short films.
- Keeps a personal **film journal**, often writing on napkins, postcards, ticket stubs.
- Obsessed with **criterion packaging** and tactile media design.
- Uses **Letterboxd**, but in a whisper, not a shout.

Goals & Dreams

- To **direct films that feel like dreams** — moody, emotional, layered.
- To one day screen his debut feature at a small cinema like the ones he loves.
- To **build an aesthetic language** that blends graphic design with personal filmmaking.
- To be part of a film community that values poetry over prestige.

Pain Points

- Finds most academic film work **too dry**, missing the soul of cinema.
- Longs for **more physical engagement** with the filmmaking process such as tickets, zines, notebooks.
- Wishes there were better ways to **capture the emotional residue** of a screening.
- Finds digital spaces overwhelming and too performative — he often **logs films privately** and writes poetic fragments instead of reviews.

Zoe Akhtar drew from the insight that the journey is fractured across platforms. Her persona as a community manager with a reflective, INFP disposition highlighted the need for tools that unify discovery, planning, and reflection. Her descriptors (valuing cinema as identity, logging as self-record, and wanting connection) translated into design flows like RSVP + calendar integration, film club invites, and map-based discovery. Testing feedback about invites feeling “personal” and the map feeling like a “treasure map” deepened her persona, giving weight to decisions around how these features were visually and interactively framed.

*“Movies
make me
feel seen
— that’s*

why I log everything. Not for the likes, but to build a record of how I’ve changed.”

Profile Overview

- **Name:** Zoe Akhtar
- **Age:** 24
- **Pronouns:** she/her
- **Location:** Wellington, NZ
- **Occupation:** Social Media & Community Manager, Lightbox Cinema (a boutique indie cinema chain)
- **Education:** Bachelor of Fine Arts in Media & Communication
- **Personality Type:** INFP — sensitive, introspective, emotionally articulate
- **Film Taste:**
 - *Letterboxd Top 4:*
 - *The Worst Person in the World*
 - *Before Sunrise*

Goals & Motivations

- To **cultivate emotional memory** through film — Letterboxd is her diary, not her portfolio.
- To help her audience at the cinema feel **connected, seen, and invited to reflect**.
- To foster a **slow media culture** that resists passive consumption.

Pain Points

- Feels a disconnect between the magic of seeing a film and the sterile process of logging it hours (or days) later.
- Struggles to make *Lightbox’s* content on social media feel as **intimate** as the screenings themselves.
- Wishes there were better tools for encouraging **audience reflection** in real time — not just star ratings or hashtags.
- Finds that many cinema-goers don’t have a habit of **sharing their emotional reactions**, even when deeply moved.

Behavior & Beliefs

- Logs every film with a short, honest reflection — often emotional, sometimes cryptic, always sincere.
- Believes **design should feel lived in**, not clinical — she loves tactile interfaces and zine-style assets.
- Advocates for **quiet UX** that enhances space rather than intrudes upon it.
- Drawn to moments where **theater and community overlap**: Q&As, zine drops, moody installations.

Tech + Tools

- **Letterboxd Pro** (obviously) — she has an emotional tagging system for moods.
- **Instagram + Threads** — she runs *Lightbox’s* online presence with a mix of moody stills, reels, and poetic captions.
- **Pinterest** — for visual world-building, personal moodboards, and campaign ideas.
- **Film Cameras** — shoots rolls of film

By anchoring each descriptor to evidence, both personas extended beyond static profiles. They became living guides where every detail, from quiet mode banners to invite card design, was a design decision made in service of the emotional and practical needs embodied by these archetypes.

Further Development of Design

At this stage, I deliberately worked between hi-fi and lo-fi concept iteration: rough wireframes allowed me to test flows quickly while higher-fidelity screens made the cinematic texture of the experience tangible.

I updated my empathy map from assignment one which has acted as a compass, keeping the focus on emotional drivers like ritual, reflection, and belonging rather than purely functional efficiency.

Finally, the user personas—developed from assignment one insights and refined through testing feedback—anchored decisions in lived perspectives, ensuring features like invites, loyalty artifacts, and reflective spaces resonated with distinct user needs while still serving the holistic ecosystem.

NEEDS / GOALS

- To ritualize cinema-going in a way that feels personal, reflective, and communal.
- To make reflection immediate, tactile, and embodied (diary windows, doodles, stubs).
- To feel invited into cinema culture through personalized, aesthetic entry points.
- To see venues play an active role in enhancing the cinematic ritual.
- To maintain intimacy (smaller groups, private fragments) while still feeling connected to a larger community.

PAIN POINTS

- Traditional logging feels too delayed, performative, or like work.
- Event listings are sterile, lack tactility or anticipation.
- Fragmentation across apps for booking, planning, reflecting is frustrating.
- Loyalty systems that feel gamified or transactional don't resonate.
- Fear of missing the emotional moment if reflection is pushed too late.

iPhone 16 - 11

iPhone 16 - 13

All the people in the club (scrollable)

Group top 4 based on how many times a film appears in a top 4 across the groups profiles (or maybe there is a voting feature later down the line possible)

So much more to consider that I didn't because could there be specific cinema tags that are linked to a different type of metadata and allows for more functionality within the app?

iPhone 16 - 12

Chooses ticket style -> vintage ticket stub, modern, limited edition, etc (maybe even if there are film or cinema specific tickets or)

Event create can lead to this place (maybe with extra group features)

iPhone 16 - 8

Still wanting to figure this out because I think its a great way to present information in an app

iPhone 16 - 7

I dont think Journal needs to be here because it's on the search page under the letterboxd.com thing

iPhone 16 - 9

Cinemas that match your taste are highlighted

iPhone 16 - 10

The Capitol
The Hollywood
Silky Otter
Academy Cinemas
Rialto Newmarket

Indicates this cinema has the Letterboxd affiliate program or some shit that I have been talking about generating that it syncs in person with so its a total Letterboxd "Experience"

Using a Letterboxd account it should be as easy to just go through tap on a time and then tap book before it then loads up the pop-up to those exact steps already done

iPhone 16 - 14

Taste map

These screens represent the shift from exploratory thinking into tangible product form, where I worked between lo-fi flows and hi-fi mockups to balance speed and fidelity.

THE **DIARY MARKUP FEATURE** DIRECTLY RESPONDS TO EMPATHY MAP INSIGHTS AROUND LOGGING FEELING PERFORMATIVE, BY MAKING REFLECTION TACTILE AND EMBODIED. THE **CINEMA MAP AND VENUE PROFILES** ANSWER USER NEEDS FOR DISCOVERY THAT FEELS PLAYFUL AND CURATED RATHER THAN OVERWHELMING, WHILE THE **TASTE MAP AND LOYALTY ARTIFACTS** REFLECT PERSONAS' DESIRE FOR IDENTITY-BUILDING WITHOUT TRANSACTIONAL GAMIFICATION.

By grounding each iteration in updated empathy mapping and persona logic, these concepts ensure that the emotional drivers of ritual, belonging, and reflection stay at the heart of the ecosystem.

Evolution of the architecture

The updated sitemaps emerged as a direct extension of the design decisions made in earlier phases. Insights from assignment one highlighted fractured journeys and the absence of ritual within the Letterboxd experience, while early mockups and user testing validated features like invites, reflective diaries, and loyalty artifacts. As I moved into hi-fi and lo-fi iteration, these features needed to be logically positioned within the app's architecture to feel native rather than bolted on.

The sitemap now reflects this:

- Homepage extends beyond Films and Reviews to include Film Club and Cinemas, responding to user feedback that discovery and community should not live outside the core navigation.
- Profile expands to include Invites and Upcoming Invites, ensuring that personal and social rituals (RSVPs, film clubs) sit alongside identity markers like diary, lists, and stats.
- New flows such as reflective logging, cinema maps, and artifact-based loyalty required integration into existing structures (Log and Activity), with refinements to avoid redundancy.

In essence, these sitemaps represent the translation of concept decisions into system architecture: every added node stems from validated user needs, while the removal of redundant structures (like duplicate watchlists) reflects my design philosophy of clarity, ritual, and emotional resonance.

Updated Sitemap to reflect new design changes and user flow

Stars = how my new proposed features fit

EDGE CASE AND ACCESSIBILITY WAS THEN SOMETHING I CONSIDERED AT THIS STAGE

JUST STAYING IN A GENERATIVE PLACE AND THINKING THROUGH ENTIRE MAP OF THE SYSTEM

Advanced interactions (micro + motion)

- **Flipcard micro-motion:** flip feels paper-like, slight shadow, easing out-quad; "tear-off" corner for RSVP.
- **Wallet pass:** dynamic QR that rotates tokens; offline fallback: alphanumeric + last-4 code.
- **Quiet Mode:** on check-in, app mutes socials for 2.5 hours; visible banner: "Enjoy the film."
- **Reflective window:** after credits, gentle haptic + glow on diary button; no push alert.
- **Diary canvas:** paper grain, cursor reveals line rules on hover; undo is a physical "rubber eraser" motion.
- **Publish later:** scheduler uses friendly phrasing: "When it feels yours again."
- **Identity artifacts:** stamps animate like ink press, light bleed; no points, no fireworks.
- **Lobby quotes:** slow dissolve of anonymous diary excerpts; seed with venue tag.

Edge cases & graceful fallbacks

- **No network at venue:** scans cache locally; kiosk prints "pending" stub; syncs later.
- **Duplicate scan / screenshot fraud:** show calm message "Already checked in at 7:12 pm."
- **Late arrival:** check-in remains valid until T+30 min; after that, convert to manual code.
- **Left mid-film:** keep check-in; diary still available; no penalty.
- **Venue offline:** kiosk stores hashes; batch verifies hourly.
- **User declines consent:** lobby never shows their words; diary still private/publishable.
- **ATTY:** toggle High Contrast, Large Type, Reduce Motion at kiosk and app.

Accessibility & inclusion

- Large-type kiosk preset, tactile focus rings, color-safe palette.
- Voice-to-text diary, captions on lobby screens, screen reader labels.
- Te reo Māori welcome line options in venue surfaces; respect local context.
- Low-stimulation modes for lobby visuals (slow fades, no strobe).

Measurement (privacy-respecting)

- **Venue:** check-ins per showtime, draft starts/post-film, return visits (no PII).
- **User:** diary completion rate, scheduled-publish usage, stamp progression.
- **Platform:** club planning after publish, taste-map interactions.

Icon & visual hints (to match my style)

- Flipcard: rounded rectangle with perforation.
- Stub: serrated edge ticket.
- Diary: lined sheet / pencil glyph.
- Check-in: QR square with small wave symbol (NFC).
- Loyalty: circular ink stamp.
- Taste Map: organic nodes with thread lines.
- Use muted inks (warm black, oxblood, forest) and serif for headings, humanist sans for labels.

User Journeying through new architecture

By grounding the journey map in my Systems Interaction Map, I was able to demonstrate how early insights became structured flows that informed testable experiences. Each touchpoint — from Flipcard Invites (A1, C1) to Check-in stubs and haptic confirmations (A4, B4, B5), through to Reflective diaries and loyalty artifacts (A7, A11, C8, C9) — maps directly to system nodes, proving the logic of continuity. This alignment ensured that user needs identified in assignment one were not abstracted away but translated into tangible, interactive rituals. In doing so, design moved from conceptual insight to embodied screen flows that both users and venues could experience as part of a unified ecosystem.

NEXT STEPS

- ↳ Visualizing flow through mockups
- ↳ Designing + Prototyping core product features
- ↳ Thinking about brand: feel + brand fit

Included other markings of
features

SYSTEMS INTERACTION MAP

Step	Description	User Actions	Platform / Venue Features	Map Nodes	Pain Points Solved
1. Invitation & Anticipation	Zoe receives a Flipcard Invite for a themed screening.	RSVPs, adds to calendar.	Flipcard Generator produces invite card with art + time.	A1, A2, C1, C2	Event listing becomes poetic and tactile ; anticipation feels like ritual.
2. Arrival & Check-In	Zoe travels via map route, checks in at venue.	Scans Wallet Pass → gets collectible stub.	QR/NFC Scan, kiosk fallback, haptic confirmation, dashboard logging.	A3, A4, A5, B2, B4, B5, B7, C4	Check-in feels magical, not transactional ; kiosk reduces performance pressure.
3. Immersive Screening	Auto Quiet Mode activates; venue surfaces adapt.	Experiences distraction-free viewing, quotes projected in lobby.	Quiet Mode, accessibility surfaces, lobby screen mood quotes.	A6, B6, B1, C11	Protects intimacy , avoids distraction, sets reflective mood.
4. Post-Film Reflection	Reflective window + haptic glow invites journaling.	Writes fragments, uploads media, uses kiosk prompt cards.	Offline save, diary draft, “Publish Later” scheduler.	A7, A8, A9, B7, C7, C8, C10, C11	Reflection is immediate, low-stakes, embodied — not delayed logging.
5. Identity & Loyalty	Attendance logged, artifact unlocked, Taste Map animates.	Shares reflection to film club; Ben collects ink stamp in journal.	Identity artifacts, loyalty map clusters, film club integration.	A11, A12, A13, C8, C9, C10, C12	Builds identity without chasing likes; loyalty is aesthetic, not transactional .
6. Venue & Community Loop	Quotes shared in lobby; staff dashboard updates; analytics feedback.	Zoe curates reflections into zines/ social posts; venues reward attendance.	Anonymous lobby quotes, privacy-safe analytics, reward links.	B1, B5, C12	Venue feels alive ; community builds shared memory, not just box office data.

State Modelling and Programming Prototype Development

At this stage of design development, I began moving my concepts into Xcode with Swift, translating earlier state models and flows into programmed screens. While my broader intention was to encode the full lifecycle logic of invites and check-ins, I focused this phase on prototyping two key experiences: the cinema wallet pass and the Letterboxd-branded cinema map. Even in these focused builds, the value of programming became clear design decisions stopped being hypothetical and started behaving in real time, revealing how tokens, passes, and maps might truly live in the user's hand. For an interaction designer, Swift and Xcode extend design beyond appearance into lived interaction, offering not just fidelity but truth. This ability to prototype with code, even at a partial scale, is both a practical edge and a poetic act where empathy, structure, and experience converge into something tangible.

State models (for prototyping logic)

INVITE (C1)

This will eventually graduate towards using an NFC chip

CHECK-IN (C4)

The next phase

WHAT DOES THIS NEED TO MATERIALISE AS

**THE IN-PERSON VISUALISATIONS AND
G E N E R A T I O N S**

What does the
flow of the in-
person
experience
emerge as
through a
process of
induction
design

DESIGN VISUALISATION OF IN-PERSON EXPERIENCE

This mockup was developed through calculated design decisions informed by my research into EVT's interaction design patterns. EVT demonstrated how modular, tactile, and atmospheric elements can extend the cinema ritual beyond the screen, and I built upon these insights to envision how Letterboxd might inhabit the in-person space. Features like print stubs, modular poster displays, and pinned reviews were positioned as designed artifacts that turn reflection into something tangible, while also anchoring community engagement. Each element ties back to my earlier empathy mapping around ritual, reflection, and belonging, ensuring the mockup feels both cinematic and special—an embodiment of Letterboxd's identity within the physical venue.

**FINALLY THE
DEVELOPMENT
OF PROJECT
PROGRESSED
AS AN
EXPLORATION
OF DESIGN,
RESEARCH,
EMPATHY AND
MARKINGS.**

OR RATHER A PUBLIC SPACE THAT
FUELS INTERACTION

Investigated

EVT

↳ Decode DESIGN PATTERNS
for the in-person experience

EVT: Interaction Patterns

1) Tiered experiences, tiered rituals

↳ EVT splits the night into distinct "worlds"

Gold Class lounges

Boutique theme rooms

4DX

V-max/IMAX scale

↳ Each tier scripts different social behaviors,
from lingering conversation to spectacle

↳ GRADUATED AFFORDANCE → guests self-select pace +
social intensity

↳ GRADUATED AFFORDANCE → guests self-select pace + social intensity

2) Pre-show dwell is intentional, not incidental

↳ Gold Class explicitly invites you to arrive early / stay after in a lounge, converting queue time into convivial time.

↳ Food & drink is the anchor that justifies slowness

↓
IS THERE A MORE MODULAR
ALTERNATIVE FOR MY IDEA??

3) Spaces tell stories (material dramaturgy)

↳ Boutique auditoria have narrative identities
↳ turning foyers into small sets

HOW CAN
THE IDEA OF

AN INTERACTIVE

Set-dressing

↓
modularity + adaptability

take place?

4) Program the season, not just the session

etc

- ↳ EVT uses eventified calendars - retrospectives, themed nights,[↑]
- ↳ gives people reasons to come together as a group, not just as individuals.

COMMUNITY EMERGES FROM RECURRING

- 5) Outdoors = automatic slowness  THIS IS A NICE IDEA FOR INVITED EVENT THEMED NIGHTS
- ↳ Moonlight cinema reframes movie-going as a picnic ritual at sunset

6) Multi-sensory intensity with safety rails

- ↳ ADX (as an example) leans into wind, water, scent, and motion - the opposite of hushed slowness - but it's tightly choreographed with explicit guidance

TAKEAWAY
= DESIGN EXTREMES WITH CLEAR BOUNDARIES!

7) Loyalty as memory, not only discount

↳ Cinebuzz books "I was there" vibes into points, tiers, and perks like 10% off F&B

↓
REWARDS TOGETHERNESS AND HABIT OVER ONE-OFF TRANSACTIONS

8) A Unified Brand that spans venues

↳ The 2022 EVT rebrand ties Entertainment + Ventures + travel so hotel-style hospitality sensibilities show up in cinemas → (lounges, service rituals)

↳ Cross-vertical muscle = better place-making

I see hand-drawn sketches and markings as a form of authorship in design—proof that ideas were lived, felt, and risked in real time. In an age where AI can generate polished outputs instantly, these imperfect traces hold a different kind of value: they are human, embodied, and personal. Each line, smudge, and annotation carries the energy of its making, revealing the intuition, hesitation, and momentum behind the work. For me, sketching is more than a tool of communication—it is a philosophy of authorship, a way of insisting that design remains anchored in the human hand even as it evolves alongside machines

This practice also shaped my process in this project, helping me translate raw intuition into structured concepts and reinforcing my identity as a designer whose work is grounded in tactility, authorship, and the lived energy of making.

Having read through my intentions for project 2 I would say that I am actually nitting them: it's just the means of translating them that is needed.

THE NEXT IS HOW DO

YOU MAKE THE CINEMA

EXPERIENCE FUN, UNIQUE AND ENGAGING?

REFLECTION
PAIRINGS?

• QR scan unlocks

someone else at your screening who
can review the film with after you

• CINEMA loyalty → logging/meta-tagging cinema means you unlock
specific rewards

Next Steps for Assignment Three

Building on the process and methods developed so far, my next steps focus on deepening the interaction of the in-person cinema experience and refining how Letterboxd can meaningfully extend into physical space.

1. Refine High-Fidelity Flows

- **Continue evolving the UI with cinematic textures and tactile gestures, ensuring the wallet pass, check-in, and reflective diary prompts feel authored, not generic.**
- **Strengthen the consistency of the interaction arc (check-in → reflection → archive), polishing micro-interactions so they read as cinematic moments rather than functional tasks.**

2. Usability Testing in Cinematic Contexts

- **Conduct testing with cinema-goers in a real-world venue such as Academy Cinema to observe how flows like QR/NFC check-in, reflective diary prompts, and shared cultural artifacts resonate in practice.**
- **Validate both delight and accessibility, ensuring that interactions enhance the cinema ritual rather than interrupt it.**

3. Extend EVT-Inspired Research

- **Explore EVT's design patterns over time: how do post-film artifacts, reflective prompts, or loyalty moments carry meaning not just immediately after a screening, but days or weeks later?**

- Use this longitudinal approach to test whether the “cultural archive” dimension of the design—shared quotes, collective memory, tactile stubs—truly enriches belonging and identity.

4. Iterative Expansion of Prototypes

- Translate state models into functioning coded prototypes (beyond the map and wallet pass) to simulate lifecycle transitions like draft → check-in → artifact creation.

- This allows the flows to be experienced not only visually but behaviorally, making interaction patterns testable in their lived form.

5. Final Positioning

- Frame the prototype as a portfolio-worthy, independently spirited contribution to interaction design—one that demonstrates how Letterboxd could extend into the cinema space while staying true to its brand.

- Highlight the philosophical throughline: sketching, empathy mapping, EVT research, and coding converge to insist that cinema-going is not just transactional but an authored ritual of reflection and community

Conclusions and Reflections on the Design Process:

Design is an engine for modes of thinking that enable innovation and clarity of decision. However the process by which insight is transformed from the seedlings of intuitive gesture towards a tactile artefact requires a navigation through clusters of chaos and meaning making.

Through this process of designing for the Letterboxd experience there has been a **bravery in traversing the terrain of the unknown** and following the creative spirit towards design solutions that excite, emote and create real change by way of **transformation**. I subscribe to the kernel of thought has been structures necessary for the **change** to follow have set in motion. It is as if the ideas are in fact the core **fabricated reality**.

molecular the notion that once planted, the **waves of** already been essence of creators of our

There is a great responsibility to potential you can possess as an design. Consequently I understand the process of **design as a privilege**, to get to design is a gift through which I have the agency to channel that same spirit into enhancing the **human experience**.

acknowledging the agent of change through

Overwhelm begets clarity. The potential of my first assignment was, truthfully, very overwhelming to piece together. Part of mapping out the whole conceived journey was so that I could begin to see what would and wouldn't be possible — but as I got in and began experimenting, I quickly realised how much more I hadn't yet observed at a micro level of detail.

The solution for driving cinema. Alongside valuable my handwriting head, forcing myself into articulating half-formed ideas through words. Strangely, I often find words even more beneficial than

was to return to my core: to design presence, and to focus on people into the in-person experience first and foremost. this, I've recognised how own methods are. I enjoy and sketching what runs through my into articulating half-formed ideas through

sketches for painting the picture at the beginning. From there, **clouds of thoughts gradually harden into solid forms**.

For Assignment 1, the emphasis was on defining the problem space: giving shape to an intuitive feeling that Letterboxd wasn't yet translating the **lived cinema ritual**. The challenge was to ask — what is missing, and what might be designed in to make that translation meaningful? Assignment 2 has been about refinement: running my research through the sieve of flows, prototypes, and systems to distil the big cluster into something coherent and native to Letterboxd's **architecture**.

I believe I have achieved what I set out to do. The design proposals I now have are not just functional but also original and **independently spirited**. They foreground **presence over convenience**, and they are already portfolio-worthy contributions to the discipline of interaction design. More importantly, they reflect a design philosophy I want to keep cultivating: **brave, poetic, and deeply human**.
