Assignment 2 - Engoo Materials

300585980

PROJECT OVERVIEW & CHALLENGE

The core challenge identified in my Assignment One research is to redesign Engoo's material selection process to better serve students during lesson booking. Currently, the Materials module functions in isolation from booking flows, tutor matching, and subscription guidance.

This fragmentation creates a cognitively heavy and frustrating experience, especially for Engoo's core users: intermediate, time-constrained working professionals.

Design Challenge:

- Present the right material at the right time, with clarity and context.
- Connect the Materials library seamlessly to Engoo's wider infrastructure (booking, tutors, subscriptions).
- Reduce decision fatigue and make material selection feel intuitive and motivating.

My personal understanding: The existing Engoo experience is siloed and overwhelming. My role is to reframe this into a streamlined, personalised learning gateway where materials, tutors, and subscription tiers are naturally integrated

Disconnected + NOT user-friendly

Revised Brief & Project Scope

Requirements I Intend to Address:

- Access Clarity → Students must instantly see which materials are available under their subscription tier.
- Tutor-Material Matching → Suggest tutors aligned with selected materials (e.g., “Business English” → tutor with Business badge).
- Progressive Disclosure → Preview material goals or dialogue before committing, reducing cognitive load.
- Interface Unification → Bridge the gap between “Materials” and “Booking” pages.
- Upgrade Nudging → Tasteful, non-invasive CTAs to show value of locked content.

Scope for Redesign:

- Mobile-first redesign of the Materials flow integrated with booking and tutor compatibility.
- UI informed by Japanese minimalism, Engoo’s brand system, and testing with representative learners.
- Constraints: Must fit Engoo’s existing subscription logic and global scalability.

Conclusion from Assignment One:

This project will transform Engoo’s siloed Materials feature into a strategic, personalised learning gateway, enabling users to select content with confidence, match to the right tutor, and upgrade smoothly when needed

UX Laws Mapped to Assignment One Insights

1. Choice Overload in Materials Library

Problem (from Assignment One): Users are confused by the sheer volume of materials and don't know how to start. Levels and categories are unclear.

UX Law: Hick's Law (decision time increases with number/complexity of choices).

Design Action: I intend to structure the library with filters (pill-shaped tags) and progressive disclosure (show previews before full lessons). This reduces visible complexity and makes material selection faster and less overwhelming.

5. Mobile Accessibility Concerns

Problem: On mobile, buttons and filters are small and hard to use.

UX Law: Fitts's Law (time to target depends on size and distance).

Design Action: I intend to use large, thumb-friendly CTAs (pill-shaped buttons for "Book Lesson," "Upgrade") and cluster filters close to the top thumb zone. This improves speed and reduces errors on mobile.

2. Too Much Information on Tutor Profiles

Problem: Users cannot easily compare tutors profiles contain too much detail, creating decision fatigue.

UX Law: Miller's Law (working memory limited to ~7 items).

Design Action: I intend to show only the essentials on tutor cards (avatar, rating, specialization badge, availability snapshot) and hide deeper details behind a tap-to-expand interaction. This keeps comparisons manageable within human memory limits.

6. Overcomplex Upgrade Messaging

Problem: Users are confused about what's included in Standard vs Premium Lite vs Premium. The upgrade messaging often feels abrupt.

UX Law: Selective Attention/Progressive Disclosure (show information only when needed).

Design Action: I intend to reveal locked states contextually for example, greyed Material Cards with subtle "Unlock IELTS Prep with Premium Lite" overlays. This ensures users only see upgrade nudges when they matter, reducing confusion and annoyance.

3. Users Struggle with Two Siloed Systems (Materials vs Tutors)

Problem: Materials and tutors currently feel like separate flows. Users may browse a lesson but then need to restart their journey to find a tutor.

UX Law: Law of Consistency (predictability and uniformity reduce friction).

Design Action: I intend to unify Materials and Tutor Matching using consistent UI patterns (same card style, same pill-shaped tags, same lock states). Tutor compatibility notes will appear directly on Material Previews, creating one continuous journey.

7. Unclear Brand Trust / Engagement

Problem: The current UI is functional but not always engaging or reassuring users may not feel "guided" or supported.

UX Law: Aesthetic-Usability Effect (attractive things are perceived as easier to use).

Design Action: I intend to apply Engoo's design system (minimalist grids, Engoo Blue accents, pill tags, clean typography) with playful accents (orange highlights, progress streaks). This reassures users, increases trust, and makes the platform feel intuitive.

4. New Users Unsure How to Navigate Booking

Problem: First-time users don't know how many steps booking will take, which increases abandonment.

UX Law: Jakob's Law (users expect experiences to mirror familiar patterns).

Design Action: I intend to add step indicators ("Step 1 of 3: Choose Material") and align the flow with familiar marketplace patterns (card-based selections, filter chips). This builds trust through recognisable structures.

Onboarding + Tutor Matching

A) Card-Based Layouts

I intend to use card-based layouts for tutor profiles. Each tutor card will include an avatar, rating, nationality, and specialization badges (e.g., Business Specialist, IELTS Certified). This pattern allows fast scanning on mobile and mirrors familiar marketplace UIs. It directly addresses the brief's need to make tutor-material compatibility visible at a glance.

B) Pill-Shaped Tags (Filters & Badges)

I intend to apply pill-shaped tags as filters for level, goals, and tutor attributes. Within tutor cards, badges (e.g., Pronunciation Expert) will also use pill shapes. This pattern is already present in Engoo's design system and creates consistency across onboarding and booking flows, supporting the brief's focus on clarity and usability.

C) Progressive Disclosure in Tutor Matching

I intend to design tutor profiles with expandable cards. Users see key details upfront (avatar, rating, specialization), but can tap to reveal more (availability, lesson focus, biography). This pattern prevents overwhelming first-time users while still providing depth, directly aligning with the brief's goal of progressive disclosure.

D) Step-Based Progress Indicators

I intend to add step indicators (e.g., "Step 2 of 3: Choose Tutor") across onboarding and booking. This familiar pattern reassures users that the process is short and structured, reducing friction. This ties to the brief's goal of making booking transparent and stress-free.

Intended UI Patterns for Engoo Redesign

A) Filter Bar with Chips

I intend to use a top-aligned filter bar with pill-shaped chips (Level, Goal, Plan). This pattern is inspired by Preply's strong tag/filter system and lets users sort Engoo's extensive catalog without navigating away from the page. It solves the brief's problem of difficulty browsing large sets of materials.

B) Material Cards with Lock/Unlock States

I intend to design each lesson as a Material Card with clear visual states including an Unlocked: title, level tag, preview snippet + Locked: grey overlay, lock icon, subtle upgrade CTA.

This pattern clarifies subscription tiers in a non-intrusive way, meeting the brief's aim of clarity of access and tasteful upgrade prompts.

C) Preview Snippets (Dialogue Samples)

I intend to add preview snippets (e.g., a line of dialogue from Daily News or Business English lessons) inside Material Cards. This pattern reinforces progressive disclosure — learners understand the tone and style of a lesson before booking. It directly solves the brief's observation that users struggle to judge lesson fit without trial and error.

D) Consistent Iconography for Categories

I intend to apply consistent iconography across Material Cards to reinforce scannability and create a clear visual hierarchy. By maintaining uniform style and weight across all icons, the library will feel more organized and approachable, reducing cognitive effort for learners as they navigate through Engoo's extensive materials.

Designing with the Engoo Brand in mind

The Role of Character

Engoo's mascot is not just a graphic it's a soft ambassador. It injects warmth into the product and provides a recognisable anchor in a sea of functional screens. In my redesign, I view the mascot as a way to carry tone: playful where it needs to motivate, reassuring where it needs to support.

Colour as a System, Not Just a Palette

Colour here is not ornamental. Engoo's blues, pinks, and accents become structural cues: guiding hierarchy, framing focus, and segmenting content without overwhelming. My approach uses colour sparingly but decisively less as "paint," more as "signal."

Principles for Visual Discipline

- Test contrast for readability, not just accessibility.
- Use accent colour as a signal of state, not decoration.
- Keep layouts open and minimal to create rhythm and breathing room.
- Pair typography that echoes Engoo's voice: approachable, crisp, and globally legible.
- Where necessary, use iconography or imagery to soften cognitive effort.

Designed First for the Hand

Engoo is lived on the phone. That means designing for small screens is not an afterthought it's the primary theatre. My focus is on:

- Clear text hierarchies for small displays
- Thumb-friendly buttons and tags
- Information structured for quick scanning
- Iconography that feels consistent, not ad-hoc

Designing with Brand Intention

For the redesign of Engoo's materials page, I'm not only solving for function but also holding the line on how the design feels. Engoo already carries a playful but professional brand, and I intend to honour that by building on their existing system of colours, mascots, and typography. The point is not decoration for its own sake, but to use aesthetic clarity as a way of elevating trust and flow. This is about making the interface work harder while looking lighter.

Card Sorting for Materials Library Results

1. Mental Models Around Difficulty Levels

- **Observation:** Users naturally grouped Engoo levels 1–3 as Beginner, 4–7 as Intermediate, and 8–10 as Advanced.
- **Insight:** This aligns with existing educational schemas of tiered difficulty and reduces cognitive load.
- **Design Implication:** Keeping the Beginner/Intermediate/Advanced tags at the top of the interface matches user expectations and strengthens trust in the system.

2. Filtering as a Familiar Navigation Pattern

- **Observation:** Introducing level tags (Beginner, Intermediate, Advanced) at the top of the materials page felt intuitive to testers.
- **Insight:** Users responded positively because it leveraged established web/app navigation mental models (filter chips, tabs).
- **Design Implication:** The filtering system should be visually consistent with Engoo's design system (chips/pills with strong label hierarchy), and should persist across contexts (materials browsing, tutor recommendations).

3. Confirmation of Material-to-Level Fit

- **Observation:** During card sorting, users generally agreed with Engoo's pre-set difficulty assignments. Few contested the level of a given material.
- **Insight:** Engoo's classification system is trusted and credible to learners, reinforcing its brand authority.
- **Design Implication:** Keep existing classifications but provide subtle supporting cues (e.g., "Vocabulary: Intermediate," "Grammar complexity: Advanced") to reinforce why a material belongs to its level.

4. Opportunity for Adaptive Personalisation

- **Observation:** Although most materials were accepted at their given levels, users noted that perceived difficulty can depend on individual background and learning goals.
- **Insight:** A static level system cannot account for personal variation in learning style, experience, or goals.
- **Design Implication:** Explore adaptive systems that re-rank or recommend materials based on user performance or tutor input, enabling a more personalised experience.

5. Engoo's Materials Library Context

- **Observation:** The current materials library is broad (Business, Travel, Grammar, Test Prep) with levels included but not emphasised in navigation. Premium locking also adds friction.
- **Insight:** Learners may feel overwhelmed by choice without clear level-based entry points.
- **Design Implication:** Pair thematic categories with difficulty filters — e.g., "Travel (Beginner), Business (Intermediate)" to balance thematic relevance with learner readiness.

6. Impact on Subscription Strategy

- **Observation:** Free materials generally fall under Beginner content, while advanced lessons are often premium-locked.
- **Insight:** Level filtering can double as a marketing funnel: Beginner is free, Intermediate/Advanced reveal the value of upgrading.
- **Design Implication:** Integrate difficulty filters into subscription nudges (e.g., "Upgrade to access Advanced lessons"), making the system a natural upsell trigger.

Open Card Sort + User Insights/ Observations

User 1 organised the materials based on difficulty

User 3 organised the cards based on their interests

User 2 organised the cards based on apparent similarity of content modules

Key Takeaways from Card Sort for Design Thinking

1. Difficulty Levels Must Be Clear and Non-Ambiguous

- Users struggled to tell if a material was for beginner, intermediate, or advanced at a glance.
- This reinforces the need for visible, consistent difficulty labelling (chips, colour coding, or icons) rather than relying on mascots or illustrations.
- **Design Direction: Ensure difficulty state is central to card design and filter logic.**

2. Users Organise by Different Mental Models

- User 1 sorted primarily by difficulty.
- User 2 grouped based on content similarity/purpose.
- User 3 prioritised personal interests/goals.
- This shows there is no single correct way to structure the library flexibility and filter options must support all three models.
- **Design Direction: Build a system that adapts — let learners filter by difficulty, topic, or goal.**

3. Specialised Modules Sit Outside Difficulty Ranking

- Test prep (TOEFL, IELTS, TOEIC) and professional tracks (Business, Daily News) were consistently seen as separate from general materials.
- **Design Direction: Create a distinct section or tagging system for specialised/professional content so it doesn't get lost in difficulty-based groupings.**

4. Visual Design Must Reduce Ambiguity

- Users said the current mascot illustrations made it hard to judge difficulty or purpose (“I couldn’t tell how hard it would be from the fun little picture”).
- **Design Direction: Simplify card visuals, prioritising clarity over character — mascots should support tone, not be the only indicator of meaning.**

5. Personalisation is Key

- Several comments (“it should know already I’m not a Young Learner,” “I just want to learn to speak”) show frustration with irrelevant options.
- **Design Direction: Personalise recommendations based on onboarding (age, goal, level), hiding irrelevant content upfront.**

6. Clarity of Purpose > Clarity of Category

Content like Business and Daily News confused users: is it level-based, lifestyle-based, or goal-based?

Design Direction: Provide contextual explanations or preview snippets so users understand why a material exists and how it fits their goals.

① CLEAR
↳ which materials are available under current subscription

Sketching & Ideation

Once you have been onboarded and recommended tutors and materials to fit your lifestyle and goals

You need to have

o Dashboard / hub

The core promise of the Engoo experience is offering people the spoken language for business professionals on a time-constrained budget

The card sorting also helped me identify what kind of material should be presented to a user first based on clumps of recommended items

Brief description

AVAILABLE BOOKING TIMES

FROM THESE QUICK MOCKUPS/SKETCHES I LEARNED I CAN EFFECTIVELY MEET THE DESIGN GOALS OF THE BRIEF BY:

- ① BETTER IMMEDIATE ON-BOARDING FOR PERSONALISED EXPERIENCE
- ② TUTOR - MATERIAL-BOOKING INTEGRATION
- ③ DESIGNED THOUGHTFUL NUDGING

Key Takeaways from Ideation Design Sketches

1. Onboarding Leads to Personalisation

- After onboarding, students are presented with a dashboard/hub tailored to their goals and lifestyle.
- This makes the experience feel personal, adaptive, and useful, rather than generic.
- The “Recommended” and “Tutor Specialism” sections emerge directly from onboarding insights, showing continuity between entry and daily use.

2. Clarity of Access & Subscription State

- A recurring theme is making subscription tiers and material access clear.
- Sketches highlight the need to avoid ambiguity with locked vs. unlocked states by using colour-coding, icons, and overlays aligned to Engoo’s brand system.
- The design avoids intrusive upsell moments instead, nudges are contextual (e.g., locked card with a subtle upgrade CTA).

3. Card Sorting Insights Applied

- Early card sorting research influenced the decision to group materials in user-first categories.
- Materials should be surfaced in meaningful chunks of recommended items, which reduces cognitive load and gives users a sense of progression.

4. Communication of State

- Sketches emphasise clear signalling: what’s available, what’s locked, and what can be upgraded.
- Notes show the decision to not overload pop-ups with upgrade links instead, the UI itself communicates state through consistent design language.
- The design direction is toward simplicity + clarity rather than complex messaging.

5. Core Promise of Engoo Integrated

- The notes articulate Engoo’s core brand promise: affordable, native-speaker English lessons for business professionals.
- This is shaping my design focus ensuring materials and recommendations feel aligned to professional and aspirational learner goals, not just generic lesson lists.

2 POINTS OF FOCUS FLOWS

- ↳ ONBOARDING FOR TUTOR-MATERIAL PERSONALISATION + EXPERIENCE
- ↳ MATERIALS PAGE

↓

HOW CAN THE TUTORS BECOME A PART OF THE BOOKING EXPERIENCE... NOT SILDED!

Design Decisions

1. Step 1: Account Creation

Decision: Keep the sign-up process minimal, structured into 3 clear stages with a progress bar.

Confidence: This reflects my insistence on simplicity + clarity (drawn from your sketches and card-sorting insights). By making the entry point light, users are encouraged rather than intimidated.

Alignment with Brief: Meets the goal of reducing friction at the very beginning of the journey, so users move quickly into more personalised flows.

2. Step 2: Tutor Matching (Preferences)

Decision: Structured questions (level, goals, frequency, budget, timing) allow multiple mental models of navigation (difficulty, topic, interest) to converge into one adaptive system.

Confidence: This integrates directly from my research: users sorted materials differently (by level, similarity, or interests), so my flow honours all three by collecting multi-dimensional preferences.

Alignment with Brief: Supports personalisation and relevance, reducing the frustration of irrelevant content (“it should already know I’m not a young learner”).

3. Step 3: Tutor Recommendations

Decision: Tutor cards use consistent iconography, badges, and profiles to show compatibility at a glance. Filters above the cards allow refinement by type (native speakers, conversation, business).

Confidence: Drawn from the principle of clear communication of state avoiding ambiguity by making compatibility visible. I’m deliberately aligning with Jakob’s Law (users expect marketplace-style cards) but pushing clarity further through Engoo’s visual system.

Alignment with Brief: Directly addresses the silo issue tutors and materials no longer sit apart but are integrated through shared categories and goals.

4. Confirmation Screen

Decision: Booking confirmation reinforces trust and reassurance: tutor card repeated, lesson details editable, and expectations for “before your lesson” clearly stated.

Confidence: This embodies the UX law application (Progressive Disclosure + Aesthetic–Usability). It avoids cognitive overload while signalling professionalism through clean hierarchy.

Alignment with Brief: Makes subscription and booking feel transparent and reliable, tackling one of the core pain points I identified in Assignment One.

5. Tutor Profile

- Decision: Depth of information layered through expandable sections (About, Reviews, Availability), anchored by strong visual hierarchy. Tags (e.g., Business English, IELTS Prep) mirror material categories.
- Confidence: This directly integrates my thinking on consistency: tutor profiles and material cards now speak the same visual and structural language.
- Alignment with Brief: Delivers on my aim of bridging the material library with tutor selection, presenting one coherent ecosystem instead of fragmented experiences.

Think Aloud Test

1

User 1: University Student (time-poor, needs exam prep)

Sign Up:

“Oh, I like the progress bar feels quick. Nice that phone number is optional. Not too much work, I can get through this fast.”

Tutor Match:

“I’m not sure can I choose more than one focus? It says Business and Exam Prep, but I also want Conversation. It’s a little unclear. And... budget says \$10–20, is that per lesson or per subscription? That’s confusing.”

Tutor List:

“Ok, tutors look professional. I really like that I can see availability straight away when I click through that makes it feel actionable. On Preply I remember it felt more personal though here it’s just clicking boxes. I’m not sure how this connects back to the materials I’ll actually study.”

Booking:

“Calendar is so much cleaner than what I’ve seen before quick and mobile-friendly. That’s great. Confirmation page feels reassuring.”

User 2: Working Professional (wants Business English)

Sign Up:

“Super fast, very straightforward. Good UX here.”

Tutor Match:

“Business English is exactly what I’m looking for. But again, budget per lesson? Does that mean each tutor costs different amounts? I’m a bit thrown off I don’t want to make the wrong financial decision.”

Tutor List:

“All tutors look the same to me. Reviews help but I’d like more personality. Feels like the connection isn’t strong. Where’s the material part? I want to know if this tutor also uses Business English modules.”

Booking:

“Much better than the old Engoo booking, I like that the times are clear. I don’t have to scroll through endless options. But it still feels like I’m just picking a tutor, not a learning pathway.”

User 3: Motivated Casual Learner (wants conversation practice)

Sign Up:

“Easy. Love the progress bar, makes me want to finish.”

Tutor Match:

“I can tick Conversation perfect. But the options don’t feel personal to me... like Preply asked me about my goals in more detail, and I trusted the recommendations more.”

Tutor List:

“Oh, trial lessons are available! That makes me feel safe to try. Availability is easy to scan. But the way this is presented feels a little mechanical I don’t feel like the tutor match is for me, more like I filtered a spreadsheet.”

Booking:

“Nice the booking confirmation repeats the tutor details, I feel reassured. The old Engoo one was terrible, this is way more user-first.”

Strengths

- Sign-up simplicity with progress bar: quick, clear, no friction.
- Availability + trial booking system: users liked being able to instantly see availability and lock in a trial.
- Cleaner booking flow: new calendar design is mobile-first and avoids the clutter of the old Engoo booking experience.
- Trust reinforcement: repeated tutor info in confirmation builds reassurance.

Pain Points

1) Disconnect between tutors and materials:

- Users want tutor selection to feel tied to the Engoo materials they'll use, not a separate track.
- Tutor cards don't show which modules or content types they support.

2) Budget ambiguity

- Users misunderstood if pricing was per lesson vs. part of subscription tiers.
- This risks damaging trust if not clarified.

3) Onboarding depth & trust

- Current flow feels mechanical compared to Preply's more "personalised" onboarding.
- Users wanted more contextual questions (e.g., goals, preferences, background) to make recommendations feel tailored.

4) Tutor differentiation

- All tutor cards felt "same-y"; availability helped, but not enough to highlight unique strengths.

5) Flow connection

- While booking is now smoother, some users perceived too many steps or not enough linkage between "choosing a tutor" and "choosing a learning path."

Next Steps for Iteration

1) Integrate Tutors & Materials

- Display material tags (e.g., "IELTS Prep," "Business English") directly on tutor cards.
- Create visual links between tutor choice and module selection.

2) Clarify Pricing Model

- Replace ambiguous budget sliders with subscription-based tiers.
- Add inline microcopy clarifying that users pay through Engoo's subscription, not directly per lesson.

3) Deepen Onboarding

- Add one or two "human" onboarding questions (e.g., "What's your main motivation for learning English?").
- Keep minimal input but increase the sense of personalisation.

4) Differentiate Tutor Profiles

- Highlight specialisations, teaching style, and experience with certain modules.
- Give tutor cards more unique signals to build user trust and reduce choice fatigue.

5) Streamline Perception of Flow

- Explore merging the "Select Tutor" and "Confirm Booking" steps into one review screen.
- Offer a faster "Book Trial Instantly" path for time-constrained users.

Materials Library and Booking Flow Mockup

Design Decisions

1. Step 1: Materials Selection

- Decision: Introduce Beginner / Intermediate / Advanced filters at the top of the Materials screen to align with pre-existing mental models validated in card sorting. Each material card includes lesson goals, sample dialogue, and key vocabulary to provide transparency.
- Confidence: This is a direct response to testing insights where users were confused by difficulty mismatches. By surfacing clarity at the entry point, the design reduces friction and increases trust in lesson relevance.
- Alignment with Brief: Meets the goal of simplifying navigation and helping learners quickly identify suitable materials without feeling overwhelmed by irrelevant or confusing options.

2. Step 2: Material Preview → Tutor Connection

- Decision: Each material preview links directly to relevant tutors who are specialists in that topic. Tutor cards highlight expertise tags (e.g., Business English Specialist) and immediate availability.
- Confidence: This integrates my finding that the old Engoo flow created a silo between tutors and materials. By weaving them together, I close that gap and reflect user demand for continuity.
- Alignment with Brief: Delivers on the project aim of reducing disconnection between choosing a lesson and finding the right tutor, reinforcing Engoo's promise of structured, goal-driven learning.

3. Step 3: Save for Later & Upgrade Flow

- Decision: Introduce "Save Lesson for Later" so users can browse without committing immediately, and redesign the upgrade flow so locked content is visible but aspirational. The upsell points to tangible value (more lessons, more tutors) rather than abstract promises.
- Confidence: Built on user feedback: they valued flexibility ("I don't have to commit right now") but were frustrated by scattered locked modules. Grouping Premium upsells contextually with material previews positions upgrades as helpful, not obstructive.
- Alignment with Brief: Supports Engoo's web-first working-professional base, who are often time-constrained, while tackling one of the identified UX problems upgrade confusion and poor placement.

4. Step 4: Book Lesson (Tutor + Material Together)

- Decision: Booking combines tutor selection with lesson confirmation in one review screen, showing lesson goals, tutor details, and availability in a single glance. Only actionable details are surfaced to avoid clutter.
- Confidence: Informed by my critique of Engoo's old calendar, which forced users to slog through unnecessary components. This new design is streamlined, mobile-first, and supports quick decision-making.
- Alignment with Brief: Addresses the explicit usability issue of Engoo's dated booking system, turning it into a smooth, user-first step that builds confidence.

5. Step 5: Material–Tutor Ecosystem Consistency

- Decision: Both tutor profiles and material previews now share consistent patterns: tags, badges, structured content, and expandable sections. This ensures a coherent ecosystem where lessons and tutors feel like parts of the same pathway.
- Confidence: Reflects your guiding principle of consistency users no longer experience Engoo as fragmented silos (one for tutors, one for materials) but as a unified system.
- Alignment with Brief: Directly fulfills the scope you outlined in Assignment One: connecting Engoo's two strongest assets (tutors and materials) through clear visual and structural design, reducing user confusion and increasing motivation to learn.

Think Aloud Test

2

Scenario: First time using Engoo. You’ve heard it has great tutors and great learning materials. Your objective is to navigate the materials module, explore what interests you, and then book a lesson with a tutor connected to that material.

User 1: University Student (time-poor, needs exam prep)

Materials:

“Okay, Beginner / Intermediate / Advanced tabs make sense this matches how I think about my level. I can just click Intermediate and see what’s right for me.”

“The preview with lesson goals and sample dialogue is really nice. Makes me trust the material more.”

Tutor Connection:

“Oh tutors are actually linked to the material! This feels way less disconnected than just picking someone random. I wish it told me exactly which modules each tutor teaches though.”

Upgrade Flow:

“The locked modules are a bit frustrating I’d prefer if Premium content was grouped separately rather than scattered in the list. The copy here (‘good things, better things’) doesn’t make me trust the Premium offer.”

Booking:

“Calendar is way better than the old Engoo. It’s mobile-first, quick, and shows only what I need to act on. Love that.”

User 2: Working Professional (wants Business English)

Materials:

“Business English is exactly what I need. I like that I can Preview & Book right away. Clearer than before.”

Tutor Connection:

“I can see tutors with business writing experience that’s reassuring. But the cards still look a little same-y, I’d like to know who is best for my level or goal.”

Upgrade Flow:

“Budget per lesson is confusing. On Preply it was clearer what I’m paying for. Is this subscription or individual tutors? I don’t want to make the wrong financial choice.”

Booking:

“Trial lesson option is great. This gives me confidence to commit. I like that the confirmation repeats everything.”

User 3: Motivated Casual Learner (wants conversation practice)

Materials:

“Conversation topics, yes that’s exactly what I want. But I don’t feel like the recommendations are personal to me. Preply asked me about my goals and I trusted the results more.”

Tutor Connection:

“Oh nice, tutors are listed right under the material. I feel like I’m choosing a pathway, not just a person. That makes me trust this more.”

Save for Later:

“Save lesson for later is so useful. I don’t have to commit now — I can come back when I’m free.”

Booking:

“The mobile-first calendar is so much smoother than Engoo’s old one. Feels quick and modern.”

Strengths

- Difficulty filters (Beginner/Intermediate/Advanced) fit existing mental models validated in card sorting.
- Material previews (goals, dialogues, vocab) made content feel concrete and trustworthy.
- Tutor integration now links directly with materials, solving the old disconnect.
- Save for Later reduces pressure and supports flexible browsing.
- Booking flow is streamlined, mobile-first, and far better than Engoo’s legacy design.

Pain Points

1) Disconnect not fully solved

- Users still want tutors tied more explicitly to material modules (e.g., “This tutor has taught 50+ Business English lessons”).

2) Upgrade model confusion

- Users misunderstood whether budget was “per lesson” or subscription-based. → this was something I found out across both tests → VERY BAD DESIGN IDEA AND THAT’S OK
- Upgrade copy (“good things”) undermines trust.

3) Onboarding trust gap

- Current flow feels mechanical vs. Preply’s more personal onboarding.
- Lack of contextual framing (“Because you picked Conversation, here’s a tutor for that”).

4) Tutor differentiation

- Tutor cards felt too uniform tags helped, but learners wanted highlights about fit.

5) Premium placement

- Locked content in-line was frustrating. Users suggested grouping Premium modules separately.

Next Steps for Iteration

1) Refine Difficulty Filters Beyond Beginner/Intermediate/Advanced

- Testing confirmed these tags fit mental models, but users asked whether content really matched the stated difficulty.
- Iteration could explore adaptive or dynamic reclassification of materials (e.g., if users mark a lesson “too easy,” it shifts to Beginner in their personal feed).

2) Make “Locked Content” More Strategic

- Currently, locked Premium modules feel scattered and frustrating.
- Instead of peppering locks throughout, group them into a Premium Preview Zone where users can explore sample dialogues/vocab and see tutor matches turning frustration into aspiration.

3) Strengthen Lesson-to-Tutor Continuity

- Users liked that tutors connected to specific materials, but wanted deeper integration, such as:
- “This tutor frequently teaches this exact lesson.”
- Progression prompts: “If you enjoyed this lesson, book Tutor X for the next module in the series.”

4) Reposition Save-for-Later as a Core Journey

- Instead of being a secondary feature, elevate “Save Lesson for Later” into a personal lesson library.
- This could evolve into a lightweight adaptive system: a “Watchlist” that pushes relevant tutors when users revisit.

5) Polish Upgrade Flow with Contextual Timing

- Rather than a generic upsell page, show upgrade prompts in context of the material (e.g., “Unlock 200+ more Conversation Topics at your level”).
- This way the upsell ties directly to the material the user already showed interest in.

6) Tutor Differentiation Through Material Fit

- In this flow, tutor cards shouldn’t just show “Business English” they should show lesson compatibility badges (e.g., “Can teach Climate Change Solutions,” “IELTS Reading prep expert”).
- This ties directly back to the pain point: tutors feel too same-y when linked to materials.

A/B Testing for Brand Design System

All the users preferred A
#informative

"The headers stand out clearly without being too big, and the smaller text is really easy to read. It feels modern and clean, not like I'm reading a textbook."

"This version feels calmer the blue and orange are used sparingly but pop in the right spots. It makes the interface feel professional but still approachable."

"I really liked this version because the colors feel balanced the blue and orange highlights catch my eye without being overwhelming. It makes it easier to see what's important straight away."

"This design just feels smoother and more polished. The colors, fonts, and layout all work together it feels like an app I'd trust and enjoy spending time in."

"I preferred this one because it feels less crowded. The extra space around the cards and tags makes everything feel lighter and less stressful to look at."

[FIGMA PROTOTYPE HERE](#)

1) Visibility of System Status

- Progress bars in sign-up and booking clearly show where users are in the flow (e.g., *Step 1 of 3* → *Step 3 of 3*).
- Availability times on tutor cards update instantly and display only actionable slots (e.g., “Today 2PM, 4PM”).

2) Match Between System and Real World

- Difficulty levels (Beginner 1–3, Intermediate 4–7, Advanced 8–10) mirror mental models validated in card-sorting.
- Learning goals are expressed in plain language (“Improve speaking fluency,” “Strengthen language foundations”), matching user vocabulary.

3) User Control and Freedom

- Users can “Skip for Now” in tutor selection and “Save for Later” in materials browsing, reducing commitment friction.
- Booking confirmation allows edits (e.g., change date/time before finalising).

4) Consistency and Standards

- Material tags (e.g., *Business English*, *Grammar*, *IELTS Prep*) appear consistently across tutor cards, profiles, and confirmation pages.
- Buttons follow Engoo’s design system: blue for primary actions (e.g., “Find My Perfect Tutor”), red/orange for key selections or upgrades.

5) Error Prevention

- Budget per lesson now clarified through tier labels and subscription context, reducing confusion.
- Disabled/unavailable slots in the calendar are greyed out, preventing mistaken clicks.

6) Recognition Rather Than Recall

- Tutor recommendations repeat key details in confirmation screens, so users don't need to remember tutor expertise from earlier steps.
- Material preview cards show sample dialogues and vocabulary inline, so users can recognise relevance without searching.

7) Flexibility and Efficiency of Use

- Filters (Native Speakers, Conversation, Business) allow both novice and advanced users to refine quickly.
- Dashboard personalises content ("Recommended for You") for efficient entry back into the system.

8) Aesthetic and Minimalist Design

- Clean hierarchy in profiles (About → Specializations → Reviews → Availability) ensures only relevant info is shown first.
- The mobile-first calendar surfaces only necessary actions, eliminating the clutter of Engoo's old booking design.

9) Help Users Recognise, Diagnose, and Recover from Errors

Subscription barriers are clear: locked lessons show upgrade tiers ("Premium Required"), avoiding ambiguity about why content is inaccessible.

Microcopy on booking confirmation ("You can cancel or reschedule up to 30 minutes before") anticipates user mistakes.

10) Help and Documentation

Before-lesson checklist ("Check your internet connection, test your camera...") acts as lightweight documentation in context.

Premium upgrade screens include FAQs ("Can I cancel anytime?") to support decision-making without external help.

The final design successfully delivers on the brief: creating a **streamlined, user-first booking flow** that connects Engoo's two strongest assets tutors and materials into a coherent, delightful experience. By iterating through testing and critique, the system is no longer two siloed experiences but a **single integrated pathway**: learners can explore materials, discover relevant tutors, and confirm bookings in one cohesive journey.

This outcome directly resolves the issues flagged in Assignment One (disconnected flows, clunky calendar, lack of clarity) and answers the central design challenge: **How might we make Engoo's service feel effortless, trustworthy, and aligned with user expectations, while still retaining Engoo's unique brand identity?**

 **Brief
Fulfilled,
Excellence
and
Elegance
in Design**
